Secretariat Paris Memorandum of Understanding on Port State Control	57

During 2015 the Paris MoU continued with its work of inspecting ships in accordance with the relevant instruments of The Memorandum. This annual report contains details of the main work and developments within the Paris MoU for the year. The annexes and tables contain details of the outcomes of the inspections carried out by our Member Authorities. The Paris MoU website has been enhanced to provide greater details and tools which assist in providing inspection details to its users.

Statement by the Paris MoU chairman

In 2015 the Paris MoU carried out a Concentrated Inspection Campaign, CIC, on Crew Familiarisation For Enclosed Space Entry. This is a very important area for the safety of seafarers and the Paris MoU considered that it was important to focus on this area due to the tragic fatalities which continue to occur. It is hoped that by carrying out this CIC that this will raise awareness of the importance of this issue. The Paris MoU in publicising the results of this CIC believes that safety in this area can be improved.

The Paris MoU held its annual 48th Port State Control Committee Meeting in Noordwijkerhout, The Netherlands,

in May 2015. The meeting adopted several significant matters improving the port State control regime, many of which you can read about in this Annual Report. The meeting itself was a success and strengthens the Paris MoU for the future. The Netherlands is to be complimented on the hosting and organisation for our meeting.

The Paris MoU relationship with other regional port State control agreements and with the United States Coast Guard continues to develop. This year we welcomed the Abuja MoU who attended our committee meeting for the first time. We place great importance on the role played by all of the observers to the Paris MoU

including the ILO and the industry partners, as well as the IMO and we look forward to growing co-operation in this area.

The Paris MoU Secretariat again continued to serve its members well during the year and I would like to thank them for their contribution. I also wish to thank the Member Authorities for their contributions to all of the different fora of the Paris MoU, including: the Technical Evaluation Group (TEG) and its Chairman; all of the contributors to our Task Forces; and finally to the members of the MoU Advisory Board (MAB), all of whom have made a tremendous contribution during the year.

I would also like to thank the European Commission and the European Maritime Safety Agency (EMSA) for the excellent co-operation and strong working relationship with the Paris MoU. In conclusion, the Port State Control Officers (PSCOs) and administrators in the Member Authorities of the Paris MoU are the people who ensure the success of our endeavours. They are the ones who are the core of the Paris MoU and continue to deliver on our common objectives. They deserve our special thanks and appreciation.

Brian Hogan

The end of 2015 marked the end of a 5 year period after the introduction of a new inspection regime (NIR) in the Paris Memorandum. A good moment to reflect on what impact has been made by the changes introduced and also where the system may need some adjustments to be sustainable for the future.

Statement by the Secretary General

Safer Entry of Enclosed Spaces

The main goal of the NIR was to introduce a more risk based approach to targeting ships for inspection. This approach was chosen to give credit to quality shipping and to reward good ships with less frequent inspections. At the same time ships with a high risk profile should be subject to more frequent and thorough inspections. Also, sanctions for poor performance were strengthened and the refusal of access was applied to all ships after multiple detentions flying a flag on the “Black” or “Grey” list.

The reduction of inspections on good ships was well received by the industry. The first few years of the NIR resulted

in a significant increase of ships banned after multiple detentions. In the last 2 years the trend in banning has reversed and this may indicate that these ships have either disappeared to other areas in the world or have been decommissioned and recycled.

The NIR has also been an inspiration for some other PSC agreements. Tokyo MoU and Black Sea MoU have effectively introduced similar systems. Hopefully other regions will follow this route which will be to the benefit of global shipping and will be more effective against sub-standard ships.

Unfortunately sub-standard ships are still a reality of today's world. Unscrupulous owners even use them to smuggle refugees and send ships on a course towards the European coastline.

Equally concerning is that there are still a few flags and recognized organizations around that are willing to provide a "legal shelter" to these ships by providing them with a registry and certificates. This practice needs our attention and Paris and Tokyo MoU have submitted papers to the IMO to expose these poor performing flags and the ROs that serve them.

Although there has been a very close and effective co-operation between Paris and Tokyo MoUs, sub-standard ships will always find a new trading area unless they are stopped for good. It is therefore imperative that other regions enhance their PSC activities, training of Port State Control Officers and implement more stringent enforcement measures. Fortunately some progress can already be

reported in the area of training where with the assistance of the IMO exchange programs and training activities have been implemented. Closer collaboration between regional agreements will be the only way to put a stop to sub-standard ships on a global scale.

Richard W.J. Schiferli

Refusal of access (banning) has been used 60 times since 2013. 2015 shows a large decrease to 11 bans from 20 bans in 2014. The detention percentage has remained stable, related to 2014 at 3.33%. The number of deficiencies has decreased 10% related to 2014. The number of inspections carried out was 17,858, slightly less than 2014 (18,430).

Executive

summary

Regarding banning, most cases involved ships which have been banned for multiple detentions (45). 5 ships have been banned a second time.

A number (12) were banned for failing to call at an indicated repair yard. The remaining 3 cases involved ships which “jumped the detention”, by sailing without authorization. Over a 3 year period the flags of the United Republic of Tanzania, the Republic of Moldova, Saint Vincent and the Grenadines and Togo have recorded the highest number of bannings.

Looking at the Paris MoU “White, Grey and Black Lists” the overall situation regarding the quality of shipping seems to be stabilizing. Although individual flag states have changed lists, the total amount of 43 flag states on the “White list” equals 2014.

Sweden is leading this year’s list, followed by the United Kingdom and France. Belgium has made a move upwards on the “White List”. The United States of America has made a move downwards.

This year Portugal and Spain have moved from the “Grey List” to the “White List”. India and Switzerland moved from the “White List” to the “Grey List”. Saint Kitts and Nevis moved from the “Grey List” to the “Black List”. As 2014, in 2015 there are again 11 flags on the “Black List”, with the United Republic of Tanzania having the worst performance again.

Recognized Organizations (ROs) are delegated by flag States to carry out statutory surveys on their behalf. For this very reason, it is important to monitor their performance. The best performing RO over the period 2013-2015 was DNV GL, followed by Det Norske Veritas (DNV) and American Bureau of Shipping (ABS).¹

International Register of Shipping is bottom of the list in 2015, in terms of poor performance, followed by Universal Shipping Bureau Inc and Bulgarian

Register of Shipping. For several years a joint submission with the Tokyo MoU to IMO has addressed the correlation between flags and ROs working on their behalf. The results are published in the Annual Report as well. Useful information for the industry that would like to stay clear of the risk of sub standard shipping.

After an increase of the total number of inspections in 2014, the number has slightly decreased. Since 2011 (the start of the NIR) the average detention percentage had slightly increased annually until 2013 (3.78%), after which a significant decrease has been recorded for 2014 (3.32%). 2015 is at the same level; 3.33%.

Spain, Italy, the Netherlands, France, Germany, Greece and the United Kingdom contributed most to the overall inspection efforts in terms of percentage, together over 51%. High

Risk Ships have been operating mostly in the southern part of the region, while Low Risk Ships have been calling in the north-western part of the region.

With 1,166 inspections and 131 detentions the ships flying a “black listed flag” score a detention rate of 11.23%, which is similar to 2014 and 2013. For ships flying a “grey listed flag” the detention rate is 8.58%, which is significantly higher than 2014 (6.27%). For ships flying a “white listed flag” the detention rate is 2.50% which is at the same level as 2014.

The 5 most frequently recorded deficiencies in 2015 were “ISM” (4.3%, #1797), “fire doors/openings in fire-resisting divisions” (2.5%, #1044), “nautical publication” (2.5%, #1016), “charts” (2.4%, #996) and “oil record book” (1.6%, #645).

¹ Performance of recognized organizations is measured over a 3-year rolling period. In 2014 DNV GL was included for the first year, while DNV and GL issued certificates were still recorded as separate entities. In the 2016 report DNV and GL will no longer be listed separately (as all those certificates will have been superseded / expired / renewed).

Once a year the Port State Control Committee, which is the executive body of the Paris MoU, meets in one of the member States. The Committee considers policy matters concerning regional enforcement of port State control, reviews the work of the Technical Evaluation Group and task forces and decides on administrative procedures.

Paris MoU

developments

The task forces, of which 11 were active in 2015, are each assigned a specific work programme to investigate improvement of operational, technical and administrative port State control procedures. Reports of the task forces are submitted to the Technical Evaluation Group (TEG) at which all Paris MoU members and observers are represented. The evaluation of the TEG is submitted to the Committee for final consideration and decision-making.

The MoU Advisory Board advises the Port State Control Committee on matters of a political and strategic nature, and provides direction to the task forces and Secretariat between meetings of the Committee. The Board meets several times a year and was composed of participants from Germany, Estonia, Norway, Russian Federation and the European Commission in 2015.

Port State Control Committee

The Port State Control Committee held its 48th meeting in Noordwijkerhout, the Netherlands from 18-22 May 2015. The MoU is comprised of 27 member States.

The Committee agreed to work on a plan to elaborate the guidelines on MARPOL Annex VI, which deals with air pollution from ships.

High importance was given to the Concentrated Inspection Campaigns (CICs). Jointly with the Tokyo MoU a CIC on Crew Familiarisation for Enclosed Space Entry was scheduled from September to November 2015.

After the entry into force of the Maritime Labour Convention, 2006 (MLC,2006) in 2013, the Committee decided to carry out a CIC in 2016 to verify compliance with the Convention. The questionnaire and guidelines for this CIC have been

completed and will be adopted by the Paris MoU Committee at its next meeting in Norway. This decision demonstrates the importance to the Paris MoU of decent working and living conditions onboard ships, as well as ensuring that seafarers' rights are respected.

The report of the CIC on STCW hours of rest, carried out in September to November of 2014, was presented to PSCC48. The Committee expressed concern that during the CIC, which was publicised in advance, 912 deficiencies were recorded related specifically to STCW hours of rest and that 16 ships were detained as a result of the CIC. The results will be published and submitted to the IMO.

Montenegro has entered into the final stage towards full membership and a decision will be taken in 2016, when the Committee meets in Norway.

The Committee adopted the 2014 Annual Report, including the new White, Grey and Black List and the performance list of Recognized Organizations.

Technical Evaluation Group

The TEG convened in Riga, Latvia in December 2015. Eleven Task Forces submitted reports to the TEG for evaluation before submission to the Port State Control Committee.

Issues considered by the TEG included:

- ISM Implementation;
- Information System Developments;
- Operational control;
- Evaluation of Paris MOU Statistics;
- New Inspection Policy within the Paris MoU;
- Training Policy;
- International Working Group on ILO Consolidated Convention Guidelines;
- CIC Crew familiarisation & Entry into Enclosed Spaces 2015;
- Inspection Campaign on MARPOL ANNEX VI;
- ECDIS;
- IMO Polar Code.

Port State Control training initiatives

The Paris MoU will continue to invest in the training and development of Port State Control Officers in order to establish a higher degree of harmonisation and standardisation in inspections throughout the region.

The Secretariat organises three different training programmes for Port State Control Officers:

- Seminars (twice a year)
- Expert Training (twice a year)
- Specialized Training (once a year)

The Seminars are open to members, co-operating members and observers. The agenda is more topical than Expert and Specialised Training and deals with current issues such as inspection campaigns and new requirements.

Expert and Specialized Training aim to promote a higher degree of professional knowledge and harmonisation of more complex port State control issues and procedures. Since 2012 the IMO has been sponsoring PSCOs from other PSC agreements to attend the Paris MoU

Expert training programmes. In 2015 12 PSCOs from other MoUs attended Paris MoU training programmes and PSC seminars.

PSC Seminar 59

The 59th Port State Control Seminar was held in June 2015 in The Hague, the Netherlands. The main topic of discussion was the train the trainer course for the CIC on Crew Familiarity for Enclosed Space Entry. Furthermore there were several case studies on Paris MoU procedures and specific inspection issues. The Secretariat presented an overview of developments in the Paris MoU.

PSC Seminar 60

The 60th Port State Control Seminar was held in November 2015 in The Hague, the Netherlands. PSCOs from the Paris MoU member States and the United States Coast Guard attended the Seminar. The main topics of discussion were an update on the requirement regarding “Ship specific plans for the recovery of persons from the water” and an update on the Ballast Water Management Convention, with

an introduction into the approved Paris MoU Inspection Guidelines. Participants mentioned the new requirements of the convention will be challenging.

The Secretariat presented an overview of developments in the Paris MoU and presented cases on several subjects for discussion.

Expert and Specialized Training

For the Expert Training, the central themes are “The Human Element” and “Safety and Environment”. The theme of the Specialized Training changes every year. The training programmes are intended for experienced PSCOs. Using that experience, the participants can work together to establish a higher degree of harmonisation and standardisation of their inspection practice. Lecturers for the training programmes are invited from the Paris MoU Authorities and the maritime industry.

The 11th Expert Training “Safety and Environment”

The eleventh Expert Training programme was held in The Hague, the Netherlands, in February 2015. Important issues during this training were MARPOL, SOLAS, Load Lines, life saving appliances and oil filtering equipment. Participants from the Abuja MoU, Black Sea MoU, Caribbean MoU, Indian Ocean MoU, Mediterranean MoU, Vina del Mar agreement and EMSA took part in the training.

The 6th Specialized Training on the Inspection of Bulk Carriers

The sixth Specialized Training programme on the inspection of Bulk Carriers was held in The Hague, the Netherlands, in April 2015. Participants from the Paris MoU members States as well as the Riyadh MoU and EMSA took part in the training. During the training, the construction and certification, and the procedures for more detailed and expanded

inspections, of different types of bulk carriers were discussed. Particularly the expanded inspection on bulk carriers and gassing were highlighted.

The 15th Expert Training “The Human Element”

The fifteenth Expert Training programme on the Human Element was held in The Hague, the Netherlands in October 2015. The programme was dedicated to the MLC,2006 and STCW Conventions. As an introduction to the program the participants were asked to complete a questionnaire that would give insight into their personal “enforcement style”. At the end of the program a communication and interaction exercise was conducted. Participants from member States as well as from Riyadh MoU took part in the training.

Training in cooperation with EMSA

The Paris MoU also assists EMSA in the “PSC Seminar for Port State

Control Officers". The PSC Seminars are delivered to PSCO's from all Member States. In 2015 the fully established Professional Development Scheme (PDS) of the Paris MoU encompassed 4 EMSA/Paris MoU Seminars for PSCOs.

The Paris MoU inspection regime focuses on eradication of sub-standard shipping and on rewarding good performing ships in terms of the inspection frequency. It translates to "less, but better inspections". The regime is underpinned by an elaborate set of procedures, all aimed at providing more guidance for better inspections.

Ongoing improvements and performance measurement through inspection results require strict adherence to the established procedures. For the seminars organised for PSCOs during 2015 the earlier adopted approach was followed in order to maximise familiarisation with the procedures governing port State control inspections.

The overarching goal for the seminars remained the establishment of a harmonised approach towards Port State Control in the geographical working area of the Paris MoU. Feedback sessions with participants during the seminars indicated that indeed a wider understanding of the procedures and the available tools such as the Paris MoU manual, RuleCheck and the distance learning modules, had been achieved. The constantly evolving methodology of delivering the lectures during the seminars is deemed effective in achieving the objectives set for the seminars.

All seminars were organised by EMSA and held at its premises in Lisbon, Portugal. Lecturers were

provided both by EMSA and the Paris MoU Secretariat. The 158 participants attending these seminars during 2015 originated from all Paris MoU Member States.

Detention Review Panel

Flag States or ROs which cannot resolve a dispute concerning a detention with the port State may submit their case for review. The detention review panel is comprised of representatives of four different MoU Authorities, on a rotating basis, and the Secretariat.

In 2015 the Secretariat received eight requests for review. Three cases did not comply with the requirements for detention review. These cases were either submitted beyond the 120 days limit, were handled at national courts, challenged only RO responsibility or originated from ship owners instead of flag States or ROs.

Five cases met the criteria and were submitted to MoU members for review. In one case the detention review panel concluded that the port State's decision to detain was not justified. The panel requested the port State to reconsider the detention. In four cases the panel concluded that the detaining port State would not have to reconsider the decision to detain.

Quality management

Since 15 March 2011 the Paris MoU Secretariat has been ISO9001:2008 certified for its services and products. During 2015, the Secretariat continued the improvement of the Quality Management System and was successfully audited. The customer survey demonstrated a high level of customer satisfaction. In September 2015 the renewed requirements for ISO9001:2015 have been presented. A start has been made to see what impact these renewed requirements have on the current

QMS. The main focal point of the renewed requirements is the risk based planning and maintenance. The amendments to the new requirements have to take effect first quarter of 2017.

Paris MoU on the Internet

Last year several new statistical instruments and tools have been published on the website. Especially the "inspection results" and "KPI's" have raised quite a lot of attention. Flag and port States, government agencies, charterers, insurers and classification societies are continuously looking for data and information. They were able to monitor their performance and the performance of others on a continuous basis. The port State enters ships that are currently under detention, which are published on the website. Validated port State control data can be accessed and offered visitors more detailed information.

The latest addition to the website is the flag State performance calculator. This tool can be used by flag States for an indication on the outcome for the yearly ranking on the flag State performance.

To increase public awareness of unsafe ships, particularly serious port State control detentions are published under the heading 'Caught in the Net'. These detentions are described in detail and illustrated with photographs. In 2015 details were published of m/v "Simone", flag Republic of Sierra Leone (IMO 8035104).

Other information of interest such as the current detentions and bannings, monthly detention lists, the Annual Report, the performance lists and | news items can be downloaded from the website, which is found at www.parismou.org

Concentrated Inspection Campaigns

Concentrated Inspection Campaigns (CICs) have been held annually in the Paris MoU region over the past years. These campaigns focus on a particular area of compliance with international regulations with the aim of raising awareness, gathering information and enforcing the level of compliance. Each campaign is prepared by experts and identifies a number of specific items for inspection.

CIC 2015 Crew Familiarity on Enclosed Space Entry

PSCOs in the Tokyo MoU and Paris MoU regions have performed a Joint Concentrated Inspection Campaign (CIC) on Crew Familiarization for Enclosed Space Entry, from 1 September through 30 November 2015.

In general the results of the CIC indicate that the subject of Enclosed Space Entry is taken seriously by the

industry. The CIC did not lead to an increase in the rate of detentions however the actual compliance, shown in drills, could be better. 7.9% of drills were found to be unsatisfactory.

Results on Enclosed Space Entry show that 3776 inspections have been performed using the CIC questionnaire. Of those inspections 54 detentions have CIC topic related deficiencies. The total number of detentions in the 3-month period was 160.

Co-operation with other Organizations

The strength of regional regimes of port State control, which are bound by geographical circumstances and interests, is widely recognised. Nine regional MoUs have been established.

In order to provide co-operation to these MoUs, they may apply for observer status at the Paris MoU.

Regional agreements seeking observer status must demonstrate that their member Authorities invest demonstrably in training of PSCOs, publish inspection data, have a code of good practice, have been granted official IGO-status at IMO and have a similar approach in terms of commitment and goals to that of the Paris MoU.

All regional agreements have obtained official observer status to the Paris MoU: the Tokyo MoU, Caribbean MoU, Mediterranean MoU, Black Sea MoU, Riyadh MoU, Acuerdo de Viña del Mar, Abuja MoU and Indian Ocean MoU. The United States Coast Guard is also an observer at Paris MoU meetings.

The International Labour Organization and the International Maritime Organization have participated in the meetings of the Paris MoU on a regular basis since 1982. In 2006 the

Paris MoU obtained official status at the IMO as an Inter Governmental Organization. A delegation of the MoU participated in the 2nd session of the Sub-Committee on Implementation of IMO Instruments (III-2) in July 2015.

The 2013 Annual Report including inspection data, the performance of flag Administrations and Recognized Organizations, a combined list of flags targeted by the Paris MoU, Tokyo MoU and USCG, the results of the 2013 CIC on Propulsion and Auxiliary Machinery, the results of the 2013 Harmonized Verification Programme on Passenger Ships and information on the improvement of flag performance were submitted to III-2.

Membership of the Paris MoU

In preparation for prospective new members of the Paris MoU, the Port State Control Committee has adopted criteria for co-operating status for non-member States and observer/associate status for other PSC regions.

Specific criteria, including a self-evaluation exercise, have to be made before co-operating status can be granted.

In 2011 the maritime Authority of Montenegro joined the MoU as a co-operating member with the prospect of becoming a full member in the future.

The Paris MoU currently has 8 members with dual or even triple membership: Canada and the Russian Federation with the Tokyo MoU, while the Russian Federation is also a member of the Black Sea MoU. With Bulgaria and Romania there are further ties with the Black Sea MoU. Malta and Cyprus are also members of the Mediterranean MoU. France and the Netherlands are members of the Caribbean MoU, whilst France is also a member of the Indian Ocean MoU.

In the following pages the facts and figures of 2015 are listed. The detention percentage stabilizes at 3.33% and refusal of access plunges from 20 in 2014 to 11 this year.

Facts & Figures

2015

Inspections

With a total number of 17,858 inspections performed in 2015 the inspection figures show a decrease of 3.1% compared with the figures of 2014. Each individual ship was inspected an average of 1.17 times per year, a rate which is slightly lower to that of 2014.

After a drop in the number of inspections that started with the introduction of the New Inspection Regime in January 2011, and continued in 2012 and 2013, the 2014 figures showed an increase of 4%. 2015 shows a decrease of 3.1% again.

Deficiencies

In 2013 the number of deficiencies recorded was 49,074. In 2014 the

number of deficiencies was 45,979. In 2015 the number of deficiencies decreased significantly to 41,436.

During 53% of all inspections performed, one or more deficiencies were recorded. In 2014 this figure was 55%.

The average number of deficiencies per inspection also decreased from 2.5 in 2014 to 2.3 in 2015.

Detentions

Some deficiencies are clearly hazardous to safety, health or the environment and the ship is detained until they are rectified. Detention rates are expressed as a percentage of the number of inspections, rather than the number of individual ships inspected

to take account of the fact that some ships are detained more than once a year.

Compared with 2014, the number of detentions has decreased from 612 to 595 detentions. The average detention rate in 2015 is 3.33%. In 2014 the detention rate was 3.32%. In 2013 the detention rate was 3.78%. The detention rate has stabilized this year.

“White, Grey and Black List”

The “White, Grey and Black (WGB) List” presents the full spectrum, from quality flags to flags with a poor performance that are considered high or very high risk. It is based on the total number of inspections and detentions over a 3-year rolling period for flags with at least 30 inspections in the period.

On the “White, Grey and Black list”

for 2015, a total number of 73 flags are listed: 43 on the “White List”, 19 on the “Grey List” and 11 on the “Black list”. In 2014 the number of flags listed totalled 72 flags, namely 43 on the “White List”, 19 on the “Grey List” and 10 on the “Black List”.

The “White List” represents quality flags with a consistently low detention record. Compared with 2014, the number of flags on the “White List” remains the same. New on the “White List” are Portugal and Spain, which were on the “Grey List” last year.

Sweden has been placed highest on the list in terms of performance this year. The next in line of the best performing flags in 2015 are the United Kingdom, France, Denmark and Norway.

Flags with an average performance are shown on the “Grey List”. Their appearance on this list may act as an

incentive to improve and move to the “White List”. At the same time flags at the lower end of the “Grey List” should be careful not to neglect control over their ships and risk ending up on the “Black List” next year.

On this year’s “Grey List” a total number of 19 flags is recorded. Last year the “Grey List” also recorded 19 flags. New on the “Grey List” are India and Switzerland, which last year were on the “White List”.

Saint Kitts and Nevis has fallen from the “Grey List” to the “Black List”. The poorest performing flags are the United Republic of Tanzania, Republic of Moldova, Togo, Comoros and Cook Islands.

A graph of the distribution of listed and non listed flags indicates that only 0.7% of the ships inspected are from flags not listed on the WGB list.

Ship type

In 2015 the top 5 detention rates are for: general cargo/multipurpose ships at 5.7% (up from 5.5% in 2014); commercial yachts at 4.8% (up from 3.2% in 2014); tugs at 4.7% (down from 5.2% in 2014); refrigerated cargo ships at 4.6% (at the same level as 2014; and High Speed Passenger Craft (up from 2.7% to 3.6%).

Although “other” is not a specific type, the detention rate is the highest at 7.1% (up from 6.1% in 2014). Best performing ship types are combination carriers and heavy load ships with a zero detention rate.

Performance of Recognized Organizations

For several years the Committee has closely monitored the performance of classification societies acting as ROs for flags. To calculate the performance of the Recognized Organizations, the same formula to calculate the excess factor of the flags is used.

A minimum number of 60 inspections per RO is needed before the performance is taken into account for the list. In 2015 43 ROs are recorded on the performance list.

Among the best performing Recognized Organizations were:

- DNV GL AS (DNVGL),
- Det Norske Veritas (DNV),
- American Bureau of Shipping (ABS),
- Lloyd's Register (LR),
- Korean Register of Shipping (KRS).

The lowest performing Recognized Organizations were:

- International Register of Shipping (IS),
- Universal Shipping Bureau Inc (USB),
- Bulgarian Register of Shipping (BRS).

Compared with last year's performance level, a small shift in RO performance in 2015 can be noticed. This year even fewer organisations have been placed in the very low (1) and low performing parts (1) of the list and more ROs have been placed in the medium part of the list.

Details of the responsibility of Recognized Organizations for detainable deficiencies have been published since 1999. When one or more detainable deficiencies are attributed to a Recognized Organization in accordance with the criteria, it is recorded "RO responsible" and the RO is informed. Out of 595 detentions recorded in 2015, 73 or 12.2% were considered RO related.

Refusal of access of ships

In a total of 11 cases ships were refused access (banned) from the Paris MoU region in 2015 for reasons of multiple detentions (10), and failure to call at an indicated repair yard (1). A number of ships remain banned from previous years. Several ships have been banned a second time after multiple detentions, resulting in a minimum banning period of 12 months.

Deficiencies per major category

The number of deficiencies in the following areas accounted for approximately 66% of the total number of deficiencies. The trends in these areas are clarified below.

Certificates & Documentation

The number of deficiencies recorded as related to ships' certificates, crew certificates and documents show a significant decrease of 19% from 7,672 in 2014 to 6,238 in 2015. The relative part regarding the total deficiencies had decreased from 18.5% (in 2014) to 15.1% (in 2015).

Safety of navigation

In 2015, deficiencies in Safety of Navigation accounted for 12.4% of all deficiencies recorded (a decrease from 13.5% in 2014). The number of deficiencies in Safety of Navigation shows a decrease of 17% from 6,195 deficiencies in 2014 to 5,150 in 2015.

Fire safety

In 2015 deficiencies in fire safety accounted for 13.4% of all deficiencies recorded (equal to 2014). Although relatively the same percentage

regarding the total of deficiencies, the number of deficiencies decreased from 6176 (in 2014) to 5558 (in 2015)

Pollution prevention

Deficiencies in MARPOL Annex I show a decrease of 9% in 2015 (795), compared with 2014 (874). Deficiencies in MARPOL Annex IV show a slight decrease of 1% 2015 (338), compared with 2014 (344). Deficiencies in MARPOL Annex V show an increase of 2% 2015 (609), compared with 2014 (596). Deficiencies in MARPOL Annex VI show an increase of 2% in 2015 (470), compared with 2014 (458). The relative part regarding the total deficiencies remains similar at 5.4%.

Working and living conditions

On 20 August 2013 the Maritime Labour Convention 2006 entered into force. In 2015, as expected, the

number of ILO 147 deficiencies has decreased for the second year, while the number of MLC deficiencies has increased. Most deficiencies have been found in the following areas: Health and safety and accident prevention (area 11) 2,656 (41% of all MLC deficiencies), food and catering (area 10) 1,058 (17%), hours of work and rest (area 6) 730 (12%), accommodation (area 8) 583 (9%) and seafarer's employment agreements (area 4) 395 (6%) deficiencies. The percentage of deficiencies regarding working and living conditions, related to the total of deficiencies is 14.9%.

Management

The number of ISM related deficiencies was similar in 2015 (1797) to 2014 (1801). The percentage regarding the total deficiencies increased, however, from 3.9% to 4.3%.

Statistical Annexes

Annual Report

2015

Basic port State control figures 2015

Number of individual ships inspected

Number of inspections

Number of detentions

Note: The New Inspection Regime entered into force on the 1st of January 2011. Consequently the targeting of ships for inspection has changed; inspection figures from 2011 onwards should not be compared to the ones from 2010 and before.

Number of deficiencies

Detentions in % of inspections

Number of refusal of access

Note: The cut-off date for inspection data to be included in the Annual Report 2015 was 15 January 2016. Changes to inspection data after this date have as a rule not been taken into account.

Inspection efforts 2015

HRS, SRS and LRS inspections per member state

Commitment

Note: The number of inspectors relevant for the commitment of MoU Port States differs from the total number of inspections used in other graphs and tables. see www.parismou.org/publications-category/annual-reports for explanatory notes.

Inspection efforts of members as percentage of Paris MoU Total

MoU port States's individual contributions to the total amount of inspections

Flags meeting criteria for Low Risk Ships 2015

Flags meeting criteria for Low Risk Ships (as per 31 December 2015)		
Antigua and Barbuda	Germany	Malta
Bahamas	Gibraltar, UK	Marshall Islands
Belgium	Greece	Netherlands
Bermuda, UK	Hong Kong, China	Norway
Cayman Islands, UK	India	Panama
China	Ireland	Russian Federation
Croatia	Isle of Man, UK	Singapore
Cyprus	Italy	Sweden
Denmark	Japan	Switzerland
Estonia	Korea, Republic of	Turkey
Faroe Islands, DK	Latvia	United Kingdom
Finland	Liberia	United States of America
France	Luxembourg	

To meet the criteria for Low Risk Ships, flags should be on the Paris MoU White list and have submitted evidence of having undergone an IMO VIMSAS Audit.

Non listed flags having undergone IMO VIMSAS Audit		
Australia	Canada	Slovenia

Flags who's total number of inspections over a 3-years rolling period do not meet the minimum of 30 are not included in the Paris MoU White list. Consequently some flags cannot meet the criteria for their ships to qualify as Low Risk Ships under the Paris MoU, despite having undergone the IMO VIMSAS Audit.

Non listed flags with no detentions 2013-2015*			
Australia (2)	Georgia (6)	Mozambique (1)	Seychelles (16)
Brazil (3)	Israel (19)	Pakistan (4)	Slovakia (1)
Canada (10)	Jersey, UK (8)	Peru (2)	Slovenia (5)
Chile (1)	Mauritius (7)	Qatar (16)	South Africa (1)
Equatorial Guinea (2)	Mexico (2)	Romania (3)	Taiwan, China (22)
Ethiopia (2)	Mongolia (2)	Samoa (4)	Turkmenistan (6)
Falkland Islands (5)	Montenegro (9)	Sao Tome and Principe (2)	Venezuela (6)

Flags who's total number of inspections over a 3-years rolling period do not meet the minimum of 30 are not included in the Paris MoU White, Grey and Black lists. The flags in this table had too few inspections to be included in the lists, but had no detentions in the period 2013-2015.

* Note: The flags are listed in alphabetical order. The number of inspections over the period 2013-2015 taken into account is shown in brackets. Flags on this list do not meet the criteria for Low Risk Ships.

Distribution of listed and non listed flags 2013-2015

Only flags with 20 and more port State control inspections in 2015 and with a detention percentage exceeding the average percentage of 3.33% are recorded in this graph.

2015 detentions per flag, exceeding average percentage

- Only flags with 20 and more port State control inspections in 2015 and with a detention percentage exceeding the average percentage of 3.33% are recorded in this graph. In 2014 the average detentions percentage was 3.32%.
- The grey column represents the 2015 average detention percentage (3.33%).

* On 20 August 2013 the Maritime Labour Convention 2006 entered into force. Only Member States of the Paris MoU that had ratified the MLC, 2006 on or before 20 August 2012 were entitled to conduct PSC inspections on MLC,2006 requirements from 20 August 2013.

** For Member States of the Paris MoU that have not ratified the MLC, 2006, enforcement of the Merchant Shipping Convention (ILO 147) and the protocol of 1996 to the Merchant Shipping Convention (ILO P147) will initially continue.

* As more than one Recognized Organization might have issued or endorsed statutory certificates with regard to the same ship, an inspection can be relevant for more than one RO and might appear multiple times in this column.

** Only detentions with RO related detainable deficiencies are taken into account.

% of detentions of ships with RO related detainable deficiencies per Recognized Organization 2014-2015

(CASES IN WHICH MORE THAN 10 INSPECTIONS ARE INVOLVED)

* Only ROs with 10 and more port State control inspections in 2015 and with a detention percentage exceeding the average percentage of 0.27% are recorded in this graph. In 2014 the average detentions percentage was also 0.33%.

* The grey column represents the 2015 average detention percentage (0.27%).

In this table only Recognized Organizations that had 60 or more inspections in a 3-year period are taken into account. The formula is identical to the one used for the White, Grey and Black list. However, the values for P and Q are adjusted to $P=0.02$ and $Q=0.01$.

Performance of recognized organizations is measured over a 3-year rolling period. In 2014 DNV GL was included for the first year, while DNV and GL issued certificates were still recorded as separate entities. In the 2016 report DNV and GL will no longer be listed separately (as all those certificates will have been superseded / expired / renewed).

Note: Criteria were developed to identify flag States and Recognized Organizations acting on their behalf that jointly have a lower performance. The targeted flags are the flags placed on the “Black List”. The targeted Recognized Organizations are ROs which act on behalf of a flag on the “Black List” and have an excess factor of ≥ 0.50 on the RO performance list in combination with ≥ 10 inspections for this flag.

ROs with corresponding “Black” flags with an average detention % > 1.90% period 2013-2015

Recognized Organization	Flag State	Nr of Inspections	Inspections with detentions	Detentions %	(+/-) Average det % 1.90
Bulgarian Register of Shipping	Moldova, Republic of	28	1	3.57	1.67
Dromon Bureau of Shipping	Togo	49	1	2.04	0.14
International Naval Surveys Bureau	Cook Islands	10	1	10.00	8.10
International Register of Shipping	Saint Kitts and Nevis	34	2	5.88	3.98
Maritime Bureau of Shipping	Moldova, Republic of	26	1	3.85	1.95
Maritime Lloyd - Georgia	Tanzania, United Republic of	23	1	4.35	2.45
Venezuelan Register of Shipping	Togo	13	1	7.69	5.79
Venezuelan Register of Shipping	Tanzania, United Republic of	14	1	7.14	5.24

Note: To identify the poorest performing Recognized Organizations the average detention rate (1.90%) of the lower performing combinations of flags and ROs has been used as a limit. The outcome is a list of Recognized Organizations which performance on behalf of a flag on the Black list is poorer than the average performance of ROs performing below average.

Refusal of access (banning) per flag 2013-2015

Flag	Failed to call at indicated repair yard	Jumped detention	Multiple detentions			Total Banned ships

Explanatory note – “White”, “Grey” and “Black List”

The normative listing of Flags provides an independent categorization that has been prepared on the basis of Paris MoU port State inspection results over a 3-year period, based on binomial calculus.

The performance of each Flag is calculated using a standard formula for statistical calculations in which certain values have been fixed in accordance with agreed Paris MoU policy. Two limits have been included in the system, the ‘black to grey’ and the ‘grey to white’ limit, each with its own specific formula:

$$u_{black_to_grey} = N \cdot p + 0.5 + z \cdot \sqrt{N \cdot p \cdot (1 - p)}$$

$$u_{white_to_grey} = N \cdot p - 0.5 - z \cdot \sqrt{N \cdot p \cdot (1 - p)}$$

In the formula “N” is the number of inspections, “p” is the allowable detention limit (yardstick), set to 7% by the Paris MoU Port State Control Committee, and “z” is the significance requested (z=1.645 for a statistically acceptable certainty level of 95%). The result “u” is the allowed number of detentions for either the black or white list. The “u” results can be found in the table. A number of detentions

above this ‘black to grey’ limit means significantly worse than average, where a number of detentions below the ‘grey to white’ limit means significantly better than average. When the amount of detentions for a particular Flag is positioned between the two, the Flag will find itself on the grey list. The formula is applicable for sample sizes of 30 or more inspections over a 3-year period.

To sort results on the black or white list, simply alter the target and repeat the calculation. Flags which are still significantly above this second target, are worse than the flags which are not. This process can be repeated to create as many refinements as desired. (Of course the maximum detention rate remains 100%!) To make the flags’ performance comparable, the excess factor (EF) is introduced. Each incremental or decremental

step corresponds with one whole EF-point of difference. Thus the EF is an indication for the number of times the yardstick has to be altered and recalculated. Once the excess factor is determined for all flags, the flags can be ordered by EF. The excess factor can be found in the last column of the White, Grey or Black list. The target (yardstick) has been set on 7% and the size of the increment and decrement on 3%. The White/Grey/Black lists have been calculated in accordance with the principles above*.

The graphical representation of the system below is showing the direct relations between the number of inspected ships and the number of detentions. Both axes have a logarithmic character as the ‘black to grey’ or the ‘grey to white’ limit.
